

* Add small windows
to side walls
(Same as cat house)

Front

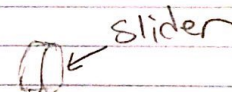

To make it easiest
I will build all the
walls in one file
but do the doors and
pole separately.

Back

Simple hollow cylinder
with peg extruded

Place to
attach slider

Doors are connecting to a
horizontal pole so they can slide.
There are two doors and they are
 $\frac{1}{4}$ the size of the wall so they blend
in when opened. I am going to reuse
the door I made for the cat house for
the barn.

I will make sliders that attach to
the doors then can easily be assembled
to the door
